

Letter of Support

It is a pleasure for me to support further research activity of Gdansk University of Technology and National Chernihiv Polytechnic University. The history of our collaboration started from 2017. During this period of time we have published more than 10 high-cited journal papers and list of cooperate project applications ("Ukraine-Poland scientists exchange program" financed by Ukrainian and Polish Ministries of sciences). All this years, our cooperation was established by personal contacts with Dr. Oleksandr Husev and his Ph.D. student Bohdan Pakhaliuk.

By this support letter, we claim that the Ph.D. program established in the National Chernihiv Polytechnic University in the field of Electrical Engineer based on a strong scientific background, which gave possibility of successful long-term scientific cooperation between our universities.

In order to fully cover modern trends in the electrical engineer the current version of the PhD program corresponds to the European Union standards and gives possibility of multidisciplinary research. In particular, increased variety of the selective subjects, which gives possibility of more comprehensive and deep study of research topic. In particular, we want to highlight the presence of the selective disciplines devoted to the wireless power transfer.

Our further cooperation will continue in the frame of the EU project H2020 MSCA-ITN. Project was launched in 2021.

Yours sincerely,
Prof, Dr. Sc.
Department of Power Electronics and Electrical Machines,
Faculty of Electrical and Control Engineering,
Gdansk University of Technology,
Ryszard Strzelecki
